MOBILE ENGINEER (REACT NATIVE)

Cross-Platform Applications | Performance, Security & Ownership

Mobile Engineer with ~2.3 years of experience building and owning production-grade React Native applications. Experienced in secure authentication flows, performance optimization, third-party integrations, and end-to-end feature ownership. Strong focus on writing scalable, maintainable code and delivering reliable mobile experiences in real-world environments.

EXPERIENCE

Mobile Engineer (React Native)

C3IHUB – IIT Kanpur, India

Oct 2024 – Present

- Built and maintained production-grade React Native applications used across the IIT Kanpur campus, focusing on security, performance, and reliability.
 - Led development of **IITK App & IITK Verifier**, enabling secure digital identity and certificate management for students and staff.
 - Designed and implemented **biometric authentication (face/fingerprint)** and **encrypted local storage** using Expo Secure Store to protect sensitive user data.
 - Integrated **DigiLocker APIs** for government-verified ID validation and QR-based credential verification workflows.
 - Implemented **real-time crash monitoring and error tracking using Sentry**, reducing unresolved production issues and improving overall app stability.
 - Collaborated with backend engineers, designers, and IIT Kanpur stakeholders to deliver scalable features and seamless API integrations.
 - Improved application performance through refactoring, debugging, and optimization of rendering and navigation flows.
-

React Native Developer

DigiMantra Labs – Mohali, India

Mar 2023 – Oct 2024

- Developed and maintained multiple cross-platform mobile and web applications using **React Native, React.js, JavaScript, and TypeScript** for diverse client requirements.
 - Owned front-end development for **OSR Jobs**, a student-employer job-matching platform, handling architecture, state management, and UI implementation.
 - Implemented **Redux-based state management**, job filtering logic, and **Stripe payment integration** for secure subscription and payment flows.
 - Optimized application performance and resolved production issues, contributing to a **15% reduction in crash rates** across deployed apps.
 - Worked closely with backend teams to integrate REST APIs and third-party services, ensuring reliable data flow and smooth user experience.
 - Participated in code reviews and feature planning to ensure maintainable and scalable front-end architecture.
-

PROJECTS

IITK App & IITK Verifier – Digital Identity Management System

Role: Mobile Engineer

Tech: React Native, Expo, TypeScript, Expo Secure Store, Biometric Auth, DigiLocker API, QR Scanning, Expo Notifications, Sentry

- Built a secure mobile application for IIT Kanpur students to access digital IDs and certificates using encrypted local storage and biometric authentication.
 - Developed a companion **Verifier app** for campus security, enabling QR-based credential scanning and DigiLocker-backed identity verification.
 - Implemented dual-language support (Hindi & English) to improve accessibility for non-technical users.
 - Integrated push notifications and monitoring tools to improve real-time communication and app reliability.
 - **Impact:** Streamlined campus security workflows and digital identity verification for a large academic environment.
-

BabyPage – Pregnancy & Baby Milestone Tracking App

Role: Mobile Engineer

Tech: React Native CLI, JavaScript, JSX, Redux Toolkit, RevenueCat (In-App Purchases)

- Built **BabyPage**, a user-friendly mobile application to help parents record pregnancy journeys, baby growth stages, and special milestones.
- Designed intuitive flows for capturing memories, growth updates, and key moments with a strong focus on usability and accessibility.
- Implemented **Redux Toolkit** for predictable and scalable state management across the application.
- Integrated **RevenueCat** to enable and manage in-app purchases and subscriptions in a reliable and scalable manner.
- Focused on clean architecture and maintainable component design to support future feature expansion.

OSR Jobs – Student–Employer Job Matching Platform

Role: Front-End Engineer

Tech: React.js, Redux, Tailwind CSS, Stripe API

- Designed and developed a responsive web platform connecting students with employers as part of a two-person engineering team.
- Built dynamic job discovery and filtering features using Redux for predictable and scalable state management.
- Integrated Stripe for secure payments and subscription handling.
- Focused on clean UI, performance, and maintainability to support future feature expansion.
- **Impact:** Enabled students to discover job opportunities through a scalable and user-friendly platform.

SKILLS

Mobile & Frontend: React Native, React Native CLI, Expo, React.js, JavaScript, TypeScript

State & Data: Redux, REST APIs, Third-Party SDKs, expo SQLite.

Security & Performance: Secure Storage, Biometric Authentication, Performance Optimization, Crash Analysis

Tools: Stripe API, DigiLocker API, Sentry, Git

Delivery: App Store & Play Store Deployment, Debugging, Production Monitoring

EDUCATION

Bachelor of Technology – Computer Science & Engineering

Shoolini University, Himachal Pradesh

2019 – 2023

LANGUAGES

English (Fluent) | Hindi (Native)
